

Game Over: The Female Gamer Experience (Gamer Girl XP)

*An Interactive Media Art Project Highlighting Female Gamer Experiences In First Person
Shooter (FPS) games and Sexism in North American and Chinese Servers*

IMA Capstone 2 Logbook - Sophia Alfred

Table of Contents (with links)

— — —

Definitions of Acronyms & Terms	3
Capstone 1:	5
Phase 1	7
Phase 2	30
Midterm	38

Phase 3	73
Phase 4	79
Phase 5	88

Definitions of Acronyms & Terms

FPS - First Person Shooter

FPS Game - a video game genre centered around weapon-based combat from a first-person perspective, where the player experiences the action through the eyes of the protagonist.

Gamer Girl - A female video game player

XP - Experience

STEM - Science Technology Engineering and Math

Hostile Sexism - overtly negative attitudes and discriminatory actions directed towards individuals, typically women, based on a belief in their inferiority or threat to male dominance.

Benevolent Sexism - a seemingly positive but ultimately patronizing form of sexism that upholds traditional gender roles by portraying women as inherently weak, nurturing, and in need of protection.

Definitions of Acronyms & Terms

— — —
NA - North American

CN - Chinese

Twine - an open-source tool for telling interactive, nonlinear stories, enabling creators to build text-based adventure games and visual novels without programming knowledge.

Harlowe - a popular story format for Twine that provides powerful macros and features for creating interactive fiction with rich, complex narratives.

UI - User Interface. the space where interactions between humans and machines occur, involving the design of screens, pages, and visual elements that help users interact with devices or software.

UX - User Experience. encompasses all aspects of an end-user's interaction with a company, its services, and its products, focusing on optimizing satisfaction and usability.

Conclusions From Capstone I, Part 1

The paper concludes that the female gaming experience in competitive FPS games varies significantly across different cultures and geolocations. The study reveals the following key points:

1. **Cultural Impact:** Local cultural norms and historical contexts heavily influence the treatment and perception of female gamers. Western games often display hostile sexism, while Eastern games exhibit benevolent sexism.
2. **Universal vs. Local Experiences:** There is a distinction between the "universal" female gaming experience and the specific experiences shaped by local cultures and geolocations.
3. **Challenges Faced by Female Gamers:** Female gamers frequently encounter toxicity, lack of representation, and the perception of being boosted rather than skilled. These challenges marginalize female gamers and hinder their participation and engagement.
4. **Stereotypes and Roles:** Stereotypes, such as the "e-girl" aesthetic and the expectation for female gamers to play supportive roles, persist across cultures and contribute to the challenges faced by women in gaming.

Conclusions from Capstone 1, Part 2

5. **Methodology:** The research employed a mixed-methods approach, combining modern technology, social media, and in-person interviews to gain comprehensive insights into the female gaming experience.

6. **Innovative Methodologies:** Leveraging livestreaming and social media allowed for real-time audience engagement and feedback, providing valuable perspectives on the female gaming experience.

7. **Implications for Inclusivity:** The findings underscore the need for promoting inclusivity and diversity in the gaming industry to foster a more welcoming and supportive environment for female gamers.

8. **Future Work:** The research methods and findings will be integrated into an impactful art piece aimed at contributing to the world of gaming for females.

Overall, the study emphasizes the importance of understanding cultural influences on the female gaming experience and the need for creating inclusive environments in the competitive gaming landscape.

— — —

Phase 1 – Conceptualization and Planning (weeks 1-4)

Concept Generation

Create an Interactive Media Art project designed to illuminate the contrasting experiences of female gamers in male-dominated FPS games across different cultural contexts.

By simulating gameplay on both NA and CN servers, the project aims to raise awareness about the pervasive sexism that female gamers encounter and hint at its broader impact on their participation in STEM fields.

Concept Definition: Purpose

The purpose of this interactive media art project is to shed light on the pervasive sexism that female gamers experience in male-dominated FPS games across different cultures. It aims to raise awareness about how this hostile environment impacts female gamers and their participation in STEM fields.

Concept Definition: Scope

— — —

The project encompasses the creation of a simulated FPS narrative video game using Twine and Harlowe. It provides players with an immersive experience that contrasts the Gamer Girl XP on NA and CN servers. The simulation includes both hostile and benevolent forms of sexism to evoke emotional responses and foster empathy.

Concept Definition: Objectives

1. **Awareness:**
To bring attention to the toxic environment of FPS games that discourages female participation.
2. **Empathy:**
To evoke empathetic and frustrating emotions in players by simulating the experiences of female gamers, thereby fostering a deeper understanding of the sexism they face.
3. **Impact on STEM:**
To highlight how sexism in gaming environments can deter women from pursuing STEM careers.
4. **Behavioral Change:**
To explore the potential for changing male gamers' attitudes and behaviors towards sexism in FPS games after experiencing the simulation.
5. **Research Contribution:**
To contribute to the body of research on female participation in STEM, particularly how barriers in gaming environments affect this participation.

Feasibility Study

Market Analysis

- Video Game Industry Size**: USD \$455.3 billion.
- FPS Game Industry Size**: USD \$105 billion.
- Gamer Girl: Account for 46% of all gamers, yet only 7% of FPS gamers.
- STEM Correlation: FPS games improve skills crucial to STEM fields. Female representation in STEM is 18% in the US, lower globally.

Feasibility Study

— — —

Technical Feasibility

- Technology Stack: Use of Twine for interactive storytelling and Harlowe for custom macro creation.
- User Interface: Immersive UI with accompanying sound and real-life sound bites.
- Gameplay Mechanics: Simulation of NA and CN servers with scenarios depicting hostile and benevolent sexism.

Feasibility Study

Operational Feasibility

- Development Team: I am going to be the game developer, narrative designer, sound designer, and cultural consultant. I will need to manage my time this semester to ensure that my vision comes to fruition.
- Implementation Timeline: Estimated 12-18 months, including development, testing, and launch phases; condensed to 15 weeks for Capstone 2 project.
- Testing and Feedback: Beta testing with target audience (both male and female gamers) for iterative improvements. Reach out to my gaming community.

Risk Analysis

- Technical Risks: Compatibility issues, bugs, and user interface challenges.
- Market Risks: Reception by the gaming community, especially male gamers.

Requirements Analysis

Functional Requirements

- **Interactive Narrative:** Story-driven gameplay using Twine and Harlowe to simulate experiences on NA and CN servers.
- **Scenario Simulation:** Depicting hostile (lewd, harassing comments) and benevolent sexism (protective, patronizing behavior).
- **User Interface:** Intuitive and immersive, with integrated sound design and real-life sound bites.

Non-Functional Requirements

- **Usability:** Easy to navigate, engaging for users, clear instructions and feedback.
- **Performance:** Smooth gameplay, minimal lag, responsive interface.

Requirements Analysis

Technical Requirements

- Software: Twine, Harlowe, sound editing software, and game development platforms.
- Hardware: Servers for hosting the game, development machines, and testing devices.
- Integration: Seamless integration of narrative elements, sound, and interactive scenarios.

Human Resource Requirements

- Cultural Consultants: Experts on NA and CN gaming cultures.
- Testers: Target audience for beta testing.

Requirements Analysis

Timeline and Milestones

- Phase 1: Conceptualization and Planning (Weeks 1, 2, 3, 4)
- Phase 2: Development (Weeks 5 -12)
- Phase 3: Testing and Iteration (Weeks 13, 14)
- Phase 4: Launch (Week 15)
- Phase 5: Post-Launch Feedback and Enhancements (Summer Semester I)

Risk Assessment

1. Technical Risks

- **Software Limitations:** Tools like Twine and Harlowe are powerful for storytelling but may have limitations in simulating complex FPS gameplay, which could impact the project's effectiveness in delivering an immersive experience.
- **System Compatibility:** Ensuring the game runs smoothly on various devices and platforms (both in North America and China) could pose technical challenges.

2. Cultural and Social Risks

- **Cultural Sensitivities:** Addressing gender issues across different cultural contexts (NA and CN) requires careful portrayal to avoid cultural misrepresentations and backlash.
- **Player Reception:** There is a risk that the project might be met with resistance or negative feedback, especially from those who deny sexism in gaming or feel accused by the project's themes.
- **Non-Gamers:** The benefits of video gaming is frequently not understood by those who do not participate in the activity.

Impact Analysis

1. Social and Cultural Impact

- **Awareness and Education:** The project aims to raise awareness about sexism in FPS games and its impact on female gamers. It could educate a broad audience, potentially changing perceptions and behaviors.
- **Influence on Game Development:** This project could influence other developers to consider gender inclusivity and safety in game design, promoting a healthier gaming environment.

2. Economic Impact

- **Contribution to STEM:** By linking FPS gaming skills with STEM competencies, the project could inspire more females to engage in STEM fields, potentially increasing diversity and innovation in these areas.
- **Gaming Industry:** Highlighting the challenges female gamers face might encourage the industry to adopt more inclusive practices, which could expand the market demographic and increase revenue.

Impact Analysis

3. Psychological Impact

- **Empathy Generation:** The immersive experience designed to evoke empathetic responses could help players (male and female) understand the emotional and psychological challenges faced by women in gaming environments.
- **Behavior Change:** Exposing male gamers to the experiences of female gamers might change attitudes and reduce sexist behaviors.

4. Educational Impact

- **STEM Engagement:** By demonstrating how gaming skills are transferable to STEM competencies, the project might encourage more young people, particularly females, to consider STEM careers.
- **Research Contribution:** The findings from this project could contribute valuable data to ongoing research into gender dynamics in gaming and STEM fields, further influencing policy and educational content.

Prototype and Testing

Objective:

The prototyping and testing phase of the "Gamer Girl XP" project aims to develop and refine preliminary models of the simulated FPS narrative video game. This phase is crucial for assessing the game's functionality, ensuring cultural accuracy, and evaluating the emotional and educational impact on players. The goal is to gather actionable feedback that will guide further development and refinement.

Prototype and Testing: Prototype Development

1.1 Concept Prototype

- **Purpose:** Create a basic interactive model using Twine and Harlowe to outline the narrative and decision points without advanced graphics or sound.
- **Scope:** Include key scenarios depicting both hostile and benevolent sexism on North American and Chinese servers.
- **Deliverable:** A text-based version of the game that allows for basic interaction and narrative exploration.

1.2 Functional Prototype

- **Purpose:** Develop a working version of the game with integrated Harlowe macros, preliminary sound effects, and basic visuals.
- **Scope:** Implement core game mechanics such as character identification, decision-making impacts, and branching narratives.
- **Deliverable:** An interactive game that can be played on a computer, demonstrating the basic look and feel of the final product.

1.3 Technical Prototype

- **Purpose:** Enhance the functional prototype with full multimedia integration, including immersive sound design and real-life sound bites.
- **Scope:** Focus on optimizing the user interface and ensuring that the game runs smoothly across different platforms, particularly focusing on compatibility with both NA and CN server simulations.
- **Deliverable:** A near-complete game with all intended functionalities that requires testing for performance and user experience.

Testing Strategy

2.1 Internal Testing

- **Participants:** Me and my housemates
- **Methodology:** Use internal playtests to identify bugs and evaluate game mechanics. Focus on technical performance and narrative coherence.

2.2 Closed Beta Testing

- **Participants:** A diverse group of beta testers including female gamers, and FPS enthusiasts from both North America and China.
- **Methodology:** Provide access to the technical prototype under controlled conditions and collect detailed feedback on gameplay experience, cultural accuracy, and emotional impact.
- **Tools:** Surveys, focus group discussions, and one-on-one interviews to gain comprehensive insights.

2.3 Open Beta Testing

- **Participants:** Open to the public from my gaming community and family of gamers, ensuring a demographic that mirrors the actual gaming community.
- **Methodology:** Send the game to interested parties, encouraging users to report any issues and provide feedback on their experience

Feedback Collection and Analysis

Feedback Channels: Set up multiple channels for feedback collection, including We Chat, one-on-one discussions, email, and social media.

Regular Updates: Schedule regular update meetings to discuss feedback and implement necessary changes rapidly.

Iterative Refinement

Rapid Prototyping: Quickly iterate on the game based on feedback, focusing on adjusting game mechanics, narrative elements, and technical aspects.

Continuous Integration: Regularly update the game build to incorporate changes and new features, ensuring that each iteration is stable and improves upon the last.

Cultural and Gender Sensitivity Checks: Regularly consult with cultural experts and gender studies scholars to ensure the game's content remains respectful and accurate.

Cost / Benefit Analysis

Costs

The development and implementation of "Gamer Girl XP" will involve little to no cost:

4. Miscellaneous Costs:

- **Time:** Requires a huge time commitment and consistency

Cost / Benefit Analysis

Benefits

The benefits of the "Gamer Girl XP" project are primarily non-financial but significant in terms of social impact and long-term economic implications:

1. Educational Impact:

- **Awareness Raising:** Educates players on the pervasive sexism in FPS gaming, potentially leading to more respectful and inclusive gaming environments.
- **STEM Promotion:** By linking FPS gaming skills to STEM abilities, the project could encourage more women to pursue STEM fields, supporting greater diversity and innovation.

2. Social Impact:

- **Cultural Change:** Might shift cultural norms and perceptions about female gamers, reducing sexism and harassment in gaming communities.
- **Empathy Development:** Helps players, especially male gamers, understand and empathize with the challenges faced by female gamers, potentially changing their behaviors.

Cost / Benefit Analysis

3. Economic Impact:

- **Industry Influence:** Could influence game developers and companies to focus on creating more inclusive games, thereby tapping into a broader market of female gamers and increasing overall industry revenue.
- **Research Contributions:** Provides valuable data and insights for academic research and policy-making in gaming and gender studies.

4. Long-Term Benefits:

- **Societal Benefits:** Contributes to a reduction in gender-based disparities in both gaming and STEM, which can lead to more balanced economic development.
- **Inspiration for Further Projects:** Sets a precedent for future projects focused on using interactive media to tackle societal issues, potentially leading to further innovative projects and collaborations.

Phase 1 - Personal Reflection

- 1. Deepening Cultural Sensitivity:** The challenge of creating content that is culturally sensitive across different geographies has heightened my awareness of the nuances in global audience perceptions. This has encouraged me to deepen my knowledge of cultural contexts, which is a skill I plan to continue developing through further education and exposure to diverse projects.
- 2. Enhancing Technical Skills:** The technical demands of integrating Twine and Harlowe with advanced multimedia elements pushed me to expand my technical expertise. Moving forward, I aim to further enhance these skills by exploring new tools and technologies, ensuring that I stay at the forefront of game development innovations.
- 3. Engaging in Continuous Learning:** The need to stay informed about the latest research in gaming, sexism, and STEM participation has underscored the importance of continuous learning. I am committed to keeping myself updated on these topics through regular reading, attending workshops, and participating in relevant forums and discussions.
- 4. Reflecting on Ethical Implications:** This project has also made me more conscious of the ethical implications of game design, especially concerning social issues. I have learned to critically evaluate how the content may affect different audiences, which I believe is crucial for any media creator. Going forward, I will continue to prioritize ethical considerations in my work to ensure that it contributes positively to society.

Conclusion

The "Gamer Girl XP" project has been instrumental in my personal and professional development. The skills and insights gained from this project are invaluable and will undoubtedly influence my future endeavors in interactive media. By applying the principles of continuous improvement, I am confident in my ability to contribute to projects that not only succeed commercially but also make a meaningful social impact.

— — —

PHASE 2:

Development (Weeks 5 -12)

Main Concept and Prototype Development

Overview of the Concept

The "Gamer Girl XP" project is designed to highlight the disparities in gaming experiences between male and female gamers, specifically in the context of FPS games which are predominantly male-dominated. The core concept of this interactive media art project is to simulate the female gamer experience in different cultural contexts, notably NA and Chinese CN servers. By leveraging an interactive game format, the project aims to evoke emotional responses that foster empathy and raise awareness about the sexism that female gamers face, which may discourage their participation in gaming and by extension, STEM fields.

Main Concept and Prototype Development

Prototype Development Strategy

1. Narrative and Gameplay Design:

- **Narrative Structure:** Develop a branching narrative using Twine that allows players to experience the game from the perspective of a female gamer. This narrative will include scenarios featuring both hostile sexism (such as lewd and harassing comments) and benevolent sexism (such as overprotectiveness and unsolicited help).
- **Cultural Contextualization:** Integrate specific cultural elements that reflect the gaming environments in North America and China, providing players with insight into how cultural differences impact the experience of sexism in gaming.

2. Technical Implementation:

- **Twine and Harlowe Integration:** Utilize Twine for story development and Harlowe as a tool to create custom macros that enhance storytelling with interactive elements, such as decision trees and dynamic content based on player choices.
- **Immersive User Interface:** Design an interface that is intuitive and engaging, integrating multimedia elements like sound bites and real-life audio to enhance the realism of the gaming experience.

3. Emotional Engagement:

- **Emotionally Driven Content:** Craft game scenarios that are designed to elicit strong emotional responses from players, aiming to build a deep sense of empathy and understanding of the female gamer's experience.

Main Concept and Prototype Development

Prototype Development Strategy

4. Prototyping Phases:

- **Initial Prototypes:** Create initial low-fidelity prototypes that focus on narrative and basic gameplay mechanics. This phase will help in mapping out the key scenarios and ensuring the narrative flow is engaging and effective.
- **Functional Prototype:** Develop a higher-fidelity prototype with integrated Twine and Harlowe elements, complete with basic sound and user interface elements. This prototype will be crucial for initial testing and feedback.
- **Technical Prototype:** Implement a fully functional prototype with all intended multimedia elements and an immersive user interface. This version will be used in broader user testing to refine gameplay, interface design, and emotional impact.

5. Testing and Iteration:

- **Internal Testing:** Conduct thorough testing within my apartment to catch bugs and refine gameplay mechanics.
- **External Testing:** Engage with a diverse group of testers from different backgrounds to gain insights into the cultural accuracy and emotional effectiveness of the game. This includes targeted testing in both North American and Chinese gaming communities.
- **Iterative Refinement:** Use feedback from all testing phases to make iterative improvements to the game, focusing on enhancing the emotional and educational impacts of the project.

Main Medium / Media

The "Gamer Girl XP" project is designed to be an interactive and immersive experience that leverages multiple media forms to convey its narrative and message effectively. Given the objectives and content of the project, the main media for the prototype will include:

Main Medium / Media

1. Interactive Digital Game

- **Platform:** The core medium will be an interactive digital game created using Twine, an open-source tool for telling interactive, nonlinear stories. Twine is particularly suited for developing branching narratives and complex decision trees that can simulate the varying experiences of female gamers in FPS environments.
- **Gameplay Mechanics:** The game will incorporate FPS gameplay elements simulated within the Twine environment to give players a feel for FPS mechanics, although the primary focus will be on narrative experiences rather than action-based gameplay.

2. Harlowe Scripting

- **Customization and Functionality:** Harlowe, a popular story format for Twine, will be used to enhance the game with custom macros that allow for advanced interactivity. This includes branching dialogues, dynamic content changes based on player choices, and integration of gameplay statistics.
- **Enhanced Interaction:** Harlowe will enable me to create more dynamic interactions within the game narrative, such as changing scenarios based on user decisions and incorporating logic-based outcomes that reflect real-world consequences.

Main Medium / Media

3. Multimodal User Interface

- **Visuals:** The game will feature a visually rich interface that is easy to navigate and engaging. It will include graphical elements that reflect the aesthetics of both North American and Chinese gaming cultures, with culturally appropriate designs, symbols, and UI elements.
- **Audio:** Sound plays a critical role in immersing players in the gaming experience. The prototype will include accompanying soundtracks, real-life sound bites, and possibly voice acting to enhance the narrative and evoke stronger emotional responses. Audio cues will also be used to signify changes in the game environment or reactions to player decisions.

MIDTERM PRESENTATION **

GAMER GIRL EXPERIENCE

Sophia Alfred

**How does culture
impact the female
gaming XP?**

Highlights challenges and negative experiences

Simulates experiences through interactive game

Fosters empathy and raises awareness

Project Concept

Simulates the contrasting experiences of female gamers on NA and CN servers.

Uses Twine and Harlowe to create a narrative-driven game.

Evokes emotional responses to hostile and benevolent sexism.

Where does it come from?

Hostile Sexism

- Empowerment through sexuality
- Women in power has status & social order
- The Femme Fatale

Benevolent Sexism

- Men protect, lead, responsible
- Women are submissive to men
- Kawaii esthetic and shojo

Uniqueness

- Uses Interactive Media to address social issue
- The integration of real-life sound bites and an immersive UI enhances emotional engagement.
- influence broader societal attitudes towards women
- Compelling tool for education and awareness
- The comparison provides a comprehensive understanding
- Indirectly correlates gamer girls and STEM participation

Design and Mechanics

Wireframe Diagrams

Starting Screen

* Narrative text box for immersive storytelling.

Server Selection Screen

* Decision buttons for interactive choices.

Game Interface (Example Scenario)

* Status indicators and audio controls.

Challenges Faced by Gamer Girls

Toxicity

While both genders experience toxicity such as griefing or trash talking, women were more frequently the target of sexual harassment and stereotyping. (Pew Research Center 2014, Kuznekoff and Rose 2013).

Not Taken

In competitive gaming when people hear that it's a girl, they blame any loss on the female, purposely through the game. There is also a lack of female representation in higher competitive games.

Seriously

Invisible

How Female Gamers Are Viewed?

E-Girl

Oversexualization and only play games for the male gaze.

Bad at Games

View that girls don't play fps or competitive gaming. If they have a high rank, then they are "boosted".

Support

Only play healers and support characters.

"These sexist attitudes structure the broader value systems that permeate the social, cultural, political, and economic environments in which game developers create and market their wares."

-Kawaii Killers and Femme Fatal

Culture?

Universal gaming experience, but how does it differ across culture, servers, and language.

Continuous Improvement

Technical optimization and
bug fixes.

Enhanced cultural accuracy
and narrative clarity.

Improved server
infrastructure and
feedback mechanism

Future Steps

Ongoing Improvements

User Feedback

Expand Project

Final Set Up Sketch

End MidTerm Presentation

Prototype Demo

Selected Materials

The game includes the following multimedia elements:

- **Background Images:** Various background images are used to set the scenes.
- **Video:** Background videos that autoplay and loop for an immersive experience.
- **Audio:** Background music and sound effects to enhance the gameplay experience.

UI/UX Designs

The game is designed with a retro, 80s-style aesthetic, using specific fonts and text effects to create a nostalgic gaming atmosphere. The design includes:

- **Font:** 'Press Start 2P' and '8BitWonder' are used to create a retro look.
- **Text Effects:** Text shadows and animations (e.g., blinking text) to mimic old-school gaming interfaces.
- **Backgrounds:** Images and videos are used as dynamic backgrounds for different scenes in the game.
- **Buttons and Links:** Interactive elements that guide the player through different choices and scenarios.

Prototype Demo

Working Prototype

The game operates by navigating through different "passages" or scenes, each containing various interactive elements. Here is a breakdown of some key scenes:

- 1. Starting Scene:**
 - Background video plays automatically.
 - Retro-style text prompts the player to start the game.
- 2. Character Selection:**
 - Players can choose characters, but choices are limited based on predefined conditions (e.g., gender-specific roles).
- 3. In-Game Scenarios:**
 - Players are presented with choices that affect the storyline and outcomes.
 - Audio feedback is provided through background music and sound effects.

[CLICK HERE TO PLAY DEMO](#)

Prototype Demo

Further Information

- **Game Mechanics:** Implemented decision-based mechanics where player choices impact the storyline.
- **Audio Integration:** Integrated background music and sound effects to enhance the immersive experience.
- **Styling and Theming:** Developed custom CSS to create a unique visual style that complements the game's theme.
-

This demonstration provides a comprehensive overview of the game's prototype, showcasing its multimedia elements, interactive design, and the underlying code that brings it all together.

Prototype Demo

Selected Materials

The game includes the following multimedia elements:

- **Background Images:** Various background images are used to set the scenes.
- **Video:** Background videos that autoplay and loop for an immersive experience.

General Overview of the Front/Back End

Front-End Overview

1. Wireframe

The wireframe represents the layout of the user interface (UI) for the "Gamer Girl XP" interactive media project. This includes the main screens, navigation flow, and key interactive elements. Here's an outline of the primary wireframe components:

Main Menu:

- **Start Game:** Button to initiate the game.
- **Settings:** Adjust audio, display settings, and language options.
- **North America:** Enter North American Server simulation
- **Chinese:** Enter Chinese Server simulation
- **Read More:** Information on the Gamer Girl XP.
- **Restart From Beginning:** Go back to Start menu

General Overview of the Front/Back End

Front-End Overview

1. Gameplay Screen:

- **Narrative Text Box:** Central area displaying the narrative and dialogues.
- **Decision Buttons:** Interactive options for players to choose their responses and actions.

2. User Interface Design

The UI design focuses on creating an immersive and engaging experience for the player. Key design elements include:

- **Typography:** Clear and readable fonts for narrative text and interface labels.
- **Color Scheme:** A palette that enhances readability and emotional engagement.
- **Interactive Elements:** Highlighted buttons and links to guide player interactions.

General Overview of the Front/Back End

Back-End Overview

1. Structure of the Game in Twine and Harlowe

The back-end of the "Gamer Girl XP" project involves setting up the interactive narrative and logic using Twine and Harlowe. Here's an overview of the structure and key components:

Twine Story Structure:

- **Passages:** Each passage represents a segment of the narrative. Passages are linked to create branching storylines.
- **Links:** Hyperlinks within passages that guide the player to different narrative branches based on their choices.

Harlowe Scripting:

- **Variables:** Used to track player choices and progress.
- **Conditional Statements:** To dynamically change the narrative based on player actions and decisions.
- **Macros:** Custom Harlowe macros for enhanced interactivity, such as displaying conditional text or triggering sound bites.

General Overview of the Back End

— — —

General Overview of the Back End

3. Sample Code Snippets

Here are some sample code snippets using Harlowe in Twine to demonstrate the structure and logic:

a. Setting Up Variables:

harlowe

```
(set: $playerName to "")  
(set: $progress to 0)  
(set: $emotionState to "neutral")
```

General Overview of the Back End

3. Sample Code Snippets

Here are some sample code snippets using Harlowe in Twine to demonstrate the structure and logic:

b. Conditional Text:

```
(if: $emotionState is "frustrated")[You feel the weight of the hostility bearing down on you  
(else: $emotionState is "empathetic")[You can sense the underlying tension in the game.]
```

c. Player Choices and Branching:

```
[[Respond Aggressively|AggressiveResponse]]  
[[Try to Defuse the Situation|DefuseResponse]]
```

General Overview of the Back End

3. Sample Code Snippets

Here are some sample code snippets using Harlowe in Twine to demonstrate the structure and logic:

d. Updating Variables Based on Choices:

```
(link: "Respond Aggressively")[
  (set: $emotionState to "angry")
  (goto: "AggressiveResponse")
]
(link: "Try to Defuse the Situation")[
  (set: $emotionState to "calm")
  (goto: "DefuseResponse")
]
```

Overall Context and Audience

Context

The "Gamer Girl XP" project operates within the broader context of the video game industry and aims to address significant social issues through an innovative, interactive medium. Here's an outline of its context and the audience it applies to:

1. Video Game Industry

- **Economic Impact:** With the video game industry valued at USD \$455.3 billion and FPS games constituting a USD \$105 billion segment, this project taps into a highly influential and economically significant sector.
- **Gender Disparities:** Despite women making up 46% of the gaming population, their representation in FPS games is notably low at only 7%. This highlights the gender disparities and challenges faced by female gamers in this genre.

Overall Context and Audience

Context

2. Social Issues

- **Sexism in Gaming:** The project specifically addresses the pervasive sexism in male-dominated FPS games, which manifests as both hostile and benevolent sexism.
- **Impact on STEM:** The project explores how these negative experiences in gaming environments can discourage female gamers from participating in STEM fields, where there is already a significant gender gap.

3. Educational and Awareness Goals

- **Empathy and Awareness:** By simulating the female gamer experience in different cultural contexts (North American and Chinese servers), the project aims to foster empathy and raise awareness about the challenges faced by female gamers.
- **Cultural Sensitivity:** It highlights how cultural norms influence the gaming experience and sexism, providing a comparative analysis across different regions.

Overall Context and Audience

Audience

1. General Public

- **Gamers:** Both male and female gamers who are part of the FPS community or interested in the dynamics of online gaming environments.
- **Non-Gamers:** Individuals interested in social issues, gender studies, and the impact of cultural norms on different aspects of life.

2. Educators and Researchers

- **STEM Educators:** Those involved in promoting STEM education and looking for innovative ways to address gender disparities in STEM fields.
- **Researchers:** Academics and researchers studying gender issues, social dynamics in digital spaces, and the intersection of gaming and education.

Overall Context and Audience

Audience

3. Industry Stakeholders

- **Game Developers and Publishers:** Companies interested in creating more inclusive gaming environments and understanding the impact of their games on different demographics.
- **Policy Makers and Advocates:** Individuals and organizations advocating for gender equality in digital spaces and STEM fields.

4. Cultural Analysts and Sociologists

- **Cultural Experts:** Analysts and sociologists studying the impact of cultural norms on behavior and interactions within digital environments.
- **Social Activists:** Those advocating for social change and gender equality in various sectors, including gaming and technology.

Phase 3: Testing (Weeks 13, 14)

Trial 1: Internal Testing

What Worked:

- **Storyline and Narrative Flow:** The initial storyline created with Twine and enhanced with Harlowe macros flowed smoothly. The branching narratives were effective in demonstrating different scenarios of sexism.
- **Sound Integration:** The inclusion of sound bites and background music successfully enhanced the immersive experience, making the emotional impact of the game stronger.
- **User Interface:** The UI design was intuitive, allowing testers to navigate through the game without confusion. The interactive elements such as decision buttons and feedback forms functioned as expected.

Errors Occurred:

- **Minor Bugs:** Some minor bugs were identified in the decision tree, where certain choices did not lead to the intended outcomes. These were mostly due to syntax errors in the Harlowe macros.
- **Audio Sync Issues:** There were instances where soundbites did not sync perfectly with the narrative text, causing slight delays that disrupted the immersion.
- **Overwhelming Choices:** Testers found that having too many choices at certain points in the game was overwhelming and diluted the emotional impact. It made it difficult to focus on the core message.

Trial 2: Closed Beta Testing

What Worked:

- **Emotional Engagement:** Both male and female beta testers reported strong emotional responses, especially during scenarios depicting hostile sexism. The game successfully evoked empathy and frustration, aligning with the project's goals.
- **Cultural Sensitivity:** The portrayal of cultural differences between NA and CN servers was well-received. Testers appreciated the attention to cultural nuances and found the comparisons insightful.

Errors Occurred:

- **Cultural Misinterpretations:** A few testers from Chinese backgrounds pointed out that some cultural representations were slightly stereotypical or outdated, which could potentially offend players.
- **Technical Performance:** On certain lower-end devices, the game experienced lag and slow load times, affecting the overall experience. This highlighted the need for optimization.
- **Narrative Clarity:** Some testers found certain narrative passages confusing, particularly where multiple branches converged. This occasionally broke the flow and coherence of the story.

Trial 3: Open Beta Testing With Public

What Worked:

- **Broad Engagement:** The open beta attracted a wide range of participants, including gamers, educators, and social activists. This broad engagement confirmed the project's appeal across different demographics.
- **Awareness and Discussions:** The game sparked numerous discussions on social media. Many players shared their experiences and thoughts, contributing to the awareness campaign.
- **Empathy Building:** Feedback indicated that many male players gained new insights into the challenges faced by female gamers.

Errors Occurred:

- **Balancing Complexity and Engagement:** Balancing the complexity of the narrative with engaging gameplay remained a challenge. Some players felt certain parts of the game were too complex or lengthy, reducing their overall enjoyment.

Continuous Improvement Based On Trials

The "Gamer Girl XP" project, through its trials, demonstrated significant potential in raising awareness about sexism in FPS games and fostering empathy among players. However, several areas require continuous improvement:

- **Technical Optimization:** Addressing bugs, improving audio synchronization, and optimizing the game for various devices will enhance the overall user experience.
- **Cultural Accuracy:** Refining cultural representations with the help of cultural consultants will ensure respectful and accurate portrayals.
- **Simplifying Choices:** Streamlining decision points and ensuring narrative clarity will maintain engagement without overwhelming players.
- **Effective Feedback Collection:** Enhancing feedback mechanisms to ensure consistent data collection will provide more reliable insights for further development.

By addressing these issues and continuously iterating based on feedback, the "Gamer Girl XP" project can achieve its goal of creating a meaningful impact on the gaming community and beyond.

Phase 3 - Personal Reflection

My trials highlighted several areas for improvement. Technical optimization emerged as a critical need, from addressing minor bugs to enhancing audio synchronization and device compatibility. Culturally, ensuring accurate and respectful portrayals across different gaming cultures became imperative, necessitating ongoing consultation with cultural experts.

Streamlining decision points within the narrative and ensuring clarity in storytelling were also identified as essential for maintaining player engagement. Investing in robust server infrastructure to handle peak loads and improving feedback mechanisms for reliable data collection emerged as crucial steps towards refining and enhancing the project's effectiveness.

Moving forward, these insights guide our continuous improvement efforts. By iterating based on feedback and embracing technological advancements, we aim to enhance the "Gamer Girl XP" project's ability to spark meaningful conversations, drive cultural change, and foster a more inclusive gaming community. This journey not only contributes to my personal growth as a developer and advocate but also underscores the transformative potential of interactive media in addressing societal challenges.

As we navigate these challenges and opportunities, I remain committed to leveraging technology for positive social impact, advocating for greater diversity and inclusivity in gaming and beyond. The "Gamer Girl XP" project stands as a testament to the power of innovation and empathy in driving meaningful change, and I am excited to continue this journey of learning and improvement.

Personal Reflection

— — —

The demo and game setup for the "Gamer Girl XP" project have been both challenging and immensely rewarding. This project has pushed me to explore the intersection of technology, narrative storytelling, and social impact in ways I hadn't previously considered. Reflecting on the development and setup phases, several key insights and areas for personal growth have emerged.

My presentation did not unfold as planned due to unanticipated challenges with different operating systems and audio issues. I found it particularly challenging to address feedback from professors who felt that my project did not reflect a year's worth of effort. This experience has taught me the importance of allowing my work to stand on its own merits.

Throughout this process, I've encountered personal challenges, particularly dealing with perceptions from peers in the STEM field who have labeled me as a show-off or an overachiever. This has led to moments where I've felt compelled to downplay my achievements to blend in. As a female gamer and a woman in STEM, I've also faced undue focus on my appearance rather than my capabilities, which has impacted how my work is perceived and valued.

The grade of 'Incomplete' I received on this senior project was a pivotal moment that made me reevaluate how I navigate within academic and professional environments. Moving forward, I am committed to embracing and presenting my authentic self—brilliant and confident—without fear of judgment or the need to conform. I will no longer shy away from showcasing my true potential to the world.

Final Project Defense / Thoughts

1. The Power of Narrative: Setting up the game's narrative using Twine and Harlowe highlighted the profound impact storytelling can have on raising awareness about social issues. The ability to craft a story that not only engages players but also evokes strong emotional responses was a powerful experience. It reinforced the importance of narrative depth and cultural context in creating meaningful and impactful interactive media.

2. Technical Challenges and Learning: Integrating multimedia elements like sound bites and ensuring seamless gameplay presented significant technical challenges. Overcoming these obstacles required a deep dive into the functionalities of Twine and Harlowe, enhancing my technical skills and problem-solving abilities. Each bug fixed and feature implemented was a step towards a more sophisticated and polished product.

3. Cultural Sensitivity: Developing content that accurately and respectfully represents different cultural contexts was crucial. This process involved extensive research and consultation with cultural experts, which broadened my understanding of cultural nuances and their impact on the gaming experience. It was a humbling reminder of the importance of sensitivity and respect in creative work.

4. Feedback and Iteration: The feedback from internal and beta testers was invaluable. It provided insights into the user experience and highlighted areas for improvement that I hadn't initially considered. This iterative process of testing, receiving feedback, and refining the game underscored the importance of adaptability and continuous improvement.

Final Project Defense / Thoughts

Continuous Improvement for Personal Growth

- 1. Embracing Flexibility:** The iterative nature of game development taught me to embrace flexibility. Being open to feedback and willing to make changes is essential for creating a product that truly resonates with its audience. This mindset of adaptability is something I am committed to carrying forward in all my future projects.
- 2. Enhancing Technical Proficiency:** The technical demands of the project have motivated me to continue honing my skills in game development and multimedia integration. I plan to engage in further training and exploration of advanced features in tools like Twine and Harlowe, as well as other game development platforms, to expand my technical toolkit.
- 3. Deepening Cultural Awareness:** The importance of cultural awareness in storytelling has become increasingly clear. I am dedicated to deepening my understanding of different cultures through ongoing education and engagement with diverse communities. This will not only enhance the authenticity of my work but also ensure it is inclusive and respectful.
- 4. Commitment to Social Impact:** The "Gamer Girl XP" project reaffirmed my commitment to using technology and storytelling to drive social change. I am inspired to seek out and create opportunities where my skills can make a meaningful impact, particularly in areas related to gender equality and cultural representation.

— — —

Phase 5: Post-Launch Feedback and Updates (Summer Semester I)

Revising My Project, Weeks 1-2

— — —

1. Working Out Bugs

- **Details:**

- Identified and fixed bugs related to narrative branching and decision outcomes.
- Addressed syntax errors in Harlowe macros causing unexpected behavior.
- Debugged issues with variable tracking and conditional statements.

2. Adapting to Multi-Screen

- **Details:**

- Ensured the game interface scales correctly across different screen sizes and resolutions.
- Tested UI elements on multiple devices, including desktops, laptops, and tablets.
- Implemented responsive design techniques to maintain usability and aesthetics.

Revising My Project, Weeks 1-2

3. Ensuring Audio Works

- **Details:**

- Integrated sound bites and background music seamlessly with the narrative.
- Fixed audio synchronization issues to align sound effects with textual events.
- Conducted audio quality tests on various devices to ensure consistency.

4. Finishing Input from Gamer Community

- **Details:**

- Collected feedback from beta testers, focusing on gameplay experience and cultural accuracy.
- Incorporated suggestions to improve narrative clarity and decision impact.
- Addressed community concerns and adjusted content to enhance engagement and empathy.

Notes:

- The iterative process of testing and feedback has been crucial for refining the game.
- Collaboration with the gamer community has provided valuable insights and strengthened the project.

Development Process: Enhancing "Gamer Girl XP"

1. Revising Script

- **Description:**

- Reworked the narrative script to ensure clarity and emotional impact.
- Integrated feedback from initial testers to improve dialogue and scenarios.
- Enhanced cultural accuracy in depictions of North American and Chinese servers.

2. Revising Coding

- **Description:**

- Debugged existing code to fix bugs and ensure smooth gameplay.
- Improved conditional logic and variable tracking for better narrative flow.
- Enhanced the user interface for a more immersive experience.

Development Process: Enhancing "Gamer Girl XP"

3. Adding Coding

- **Description:**

- Implemented new features and interactive elements using Harlowe macros.
- Added functionality for multi-screen adaptability and responsive design.
- Incorporated additional sound and multimedia components.

4. Compiling Additional Gaming Clips

- **Description:**

- Collected and edited gaming clips to be integrated into the narrative.
- Ensured clips were relevant and added value to the storytelling experience.
- Used clips to enhance the realism and engagement of the game.

Development Process: Enhancing "Gamer Girl XP"

5. Live Play and Community Feedback

- **Description:**

- Conducted live play sessions within gaming communities on Chinese and NA servers.
- Gathered real-time feedback from players to identify areas for improvement.
- Adjusted game elements based on community input to enhance cultural sensitivity and gameplay experience.

Notes:

- The iterative process of revising, coding, and gathering feedback has been crucial for refining "Gamer Girl XP."
- Community engagement provided valuable insights that shaped the final version of the game.

Review and Refinement Process

— — —
Ensure Quality and Impact

1. Reviewing Spring and Summer Semester Documentations

- **Description:**

- Analyzed project documentation from previous semesters to ensure continuity and alignment.
- Incorporated insights and lessons learned from earlier stages into the current development phase.
- Ensured all past feedback and progress were integrated into the final project.

2. Reviewing Grading Rubric and Tying All Elements to Project

- **Description:**

- Carefully reviewed the grading rubric to ensure all project components met the required standards.
- Tied project elements directly to rubric criteria to maximize alignment and achieve high-quality outcomes.
- Identified and addressed any gaps between the project and rubric expectations.

Review and Refinement Process

3. Review of Specific Gaming Coding and Layout

- **Description:**
 - Conducted a detailed review of the game's coding to identify and fix any errors.
 - Assessed the layout for user experience and interface design, ensuring clarity and usability.
 - Made adjustments to optimize the coding structure and layout for better performance.

4. Intricate Review of Game and Message

- **Description:**
 - Performed an in-depth review of the game's narrative to ensure it conveyed the intended message effectively.
 - Evaluated the emotional impact of the game scenarios and player choices.
 - Ensured that the game's content was culturally sensitive and aligned with the project's goals of raising awareness about sexism in gaming.

Notes:

- The comprehensive review process was essential to refine and polish "Gamer Girl XP."
- Each step ensured the project met high standards of quality, coherence, and impact.

Final Preparation and Quality Assurance

1. Review Academic Literature Related to Project

- **Description:**
 - Conducted a thorough review of relevant academic literature to support the project's foundation.
 - Integrated theoretical insights and empirical findings to enhance the game's narrative and impact.
 - Ensured the project was grounded in current research on gender dynamics in gaming and STEM fields.

2. Manage Audio Clips and Pixels for Cross-Platform Compatibility

- **Description:**
 - Ensured audio clips and visual elements were optimized for compatibility across Windows, Linux, and iOS operating systems.
 - Adjusted settings to maintain high-quality performance on various screen sizes and resolutions.
 - Conducted rigorous testing to verify conformity and smooth operation on all platforms.

Final Preparation and Quality Assurance

3. Publish Game Through IT Community for Feedback

- **Description:**

- Released the game to a broader IT community to gather diverse feedback.
- Collected insights on gameplay, technical performance, and user experience.
- Used the feedback to make final adjustments and improvements before the official release.

4. Ensure Game Ties in with Capstone 1 Paper

- **Description:**

- Reviewed the Capstone 1 paper to ensure coherence and alignment with the game project.
- Cross-referenced key themes and findings from the paper with the game's narrative and objectives.
- Ensured the project demonstrated a clear progression from the initial research to the final game.

Final Preparation and Quality Assurance

5. Prepare Document Packet for Final Submission

- **Description:**

- Compiled all necessary documents for the final submission, including reports, feedback summaries, and academic references.
- Ensured all documentation was complete, well-organized, and aligned with submission guidelines.
- Prepared a comprehensive packet that showcases the project's development, findings, and impact.

Notes:

- The final preparation phase ensured the project was thoroughly reviewed, optimized, and aligned with academic and technical standards.
- Each step was crucial in refining the project and preparing it for successful submission and presentation.

Concept Definition: Objectives Matrix

OBJECTIVE	MET
Awareness: To bring attention to the toxic environment of FPS games that discourages female participation.	YES
Empathy: To evoke empathetic and frustrating emotions in players by simulating the experiences of female gamers, thereby fostering a deeper understanding of the sexism they face.	YES
Impact on STEM: To highlight how sexism in gaming environments can deter women from pursuing STEM careers.	YES
Behavioral Change: To explore the potential for changing male gamers' attitudes and behaviors towards sexism in FPS games after experiencing the simulation.	YES
Research Contribution: To contribute to the body of research on female participation in STEM, particularly how barriers in gaming environments affect this participation.	YES

Personal Reflection / Final Thoughts

The journey of developing the "Gamer Girl XP" project has been one of the most transformative experiences of my professional and personal life. This project has taken me through a deep exploration of gender dynamics in gaming, cultural nuances, and the powerful impact of interactive media. Reflecting on the entire process, from conceptualization to execution, several key themes stand out that have significantly contributed to my growth.

Personal Reflection / Final Thoughts

Conceptualization and Ideation

1. Identifying the Issue: The initial stage of identifying the pervasive issue of sexism in FPS games was both enlightening and motivating. Understanding that female gamers face unique challenges and significant underrepresentation in this genre drove the passion behind this project. It was clear that there was a need for an innovative approach to raise awareness and foster empathy.

2. Shaping the Vision: Formulating the vision for "Gamer Girl XP" involved extensive brainstorming and research. The idea of using an interactive narrative to simulate the female gamer experience across different cultural contexts was both challenging and exciting. This phase required balancing creativity with practicality, ensuring that the project's goals were ambitious yet achievable.

Personal Reflection / Final Thoughts

Development and Execution

3. Technical Learning Curve: Diving into the technical aspects of the project, particularly using Twine and Harlowe, was a steep learning curve. The complexities of integrating narrative depth with interactive elements and multimedia components pushed my technical boundaries. Each challenge overcome, from scripting errors to multimedia synchronization, contributed to a richer understanding of game development.

4. Narrative Crafting: Creating a compelling narrative that accurately represented the experiences of female gamers was a critical aspect of the project. This process involved multiple iterations and feedback sessions to ensure authenticity and emotional resonance. Crafting a story that could evoke empathy and frustration effectively required careful attention to detail and sensitivity.

5. Cultural Sensitivity: One of the most enriching parts of the process was the emphasis on cultural sensitivity. Collaborating with cultural consultants and conducting thorough research allowed us to create a more nuanced and respectful portrayal of gaming cultures in North America and China. This aspect not only enhanced the project but also broadened my own cultural awareness and appreciation.

Personal Reflection / Final Thoughts

— — —

Testing and Feedback

6. Iterative Improvement: The iterative process of testing and refining the game based on user feedback was invaluable. Internal testing highlighted technical issues, while beta testing with a diverse group provided insights into the user experience and cultural accuracy. This continuous loop of feedback and improvement underscored the importance of adaptability and responsiveness in development.

7. Emotional Impact: Seeing players react emotionally to the game, particularly in recognizing and empathizing with the challenges faced by female gamers, was deeply fulfilling. The unexpected reactions from male players, who were often baffled and angered by the simulated sexism, highlighted the project's potential to spark meaningful conversations and drive change.

Personal Reflection / Final Thoughts

Personal Growth and Reflections

8. Commitment to Social Impact: This project reaffirmed my commitment to leveraging technology for social good. The realization that interactive media can be a powerful tool for raising awareness and fostering empathy has inspired me to seek out more opportunities to create socially impactful projects.

9. Embracing Collaboration: The success of "Gamer Girl XP" relied heavily on collaboration with a diverse team of experts. This experience has taught me the value of diverse perspectives and the importance of effective communication and teamwork. I am committed to fostering a collaborative spirit in all future endeavors.

10. Continuous Learning: The entire process was a profound learning experience, from technical skills to cultural insights. I am motivated to continue learning and growing, staying updated with the latest in game development and cultural studies, and applying these learnings to future projects.

Personal Reflection / Final Thoughts

— — —

The "Gamer Girl XP" project has been a journey of discovery, learning, and growth. It has shown me the potential of interactive media to address complex social issues and the importance of empathy and cultural sensitivity in storytelling. As I reflect on this journey, I am filled with gratitude for the lessons learned and excitement for the future. I look forward to applying these insights to create more impactful and inclusive projects, continuing to challenge and change narratives in meaningful ways.
